

Lift / Escalator

Lifts, also known as elevators, are vertical transportation systems used to move people and goods between different levels of buildings or structures.

Types of Lifts:

There are various types of lifts designed for different applications, including:

Passenger Lifts: These are the most common types used in commercial and residential buildings.

Freight Lifts: Designed for the transportation of goods and materials in industrial settings.

Home Lifts: Compact lifts installed in residential homes.

Hospital Lifts: Specially designed for the transportation of patients on stretchers or in wheelchairs.
